RE: Insitu-Ozone Injection Pilot Test Work Plan
Ciba-Geigy facility
180 Mill Street
Cranston, Rhode Island
Plat Map 4 / Lot 1102

Dear Mr. Guarnaccia:

On November 9, 2011 the Rhode Island Department of Environmental Management (the Department) amended the Rules and Regulations for the Investigation and Remediation of Hazardous Material Releases (the Remediation Regulations). The purpose of these Regulations is to create an integrated program requiring reporting, investigation, and remediation of contaminated sites in order to eliminate and/or control threats to human health and the environment in a timely and cost-effective manner. A Pilot Study Approval Letter is a document used by the Department to approve small scale pilot studies at contaminated sites in order to evaluate feasibility, cost, time, and scope to predict the necessary parameters for design prior to implementation of a full-scale remediation.

This Pilot Study Approval Letter is not intended to evaluate, nor does it authorize, full scale remediation of an entire site (which will require an Order of Approval), arguments on cost ineffectiveness of a full scale remedy, or technology impracticability. Also, the Department reserves the right to require additional investigatory or remedial actions if the pilot study fails to achieve the goals outlined in the **Insitu-Ozone Injection Pilot Test Work Plan** within a period of time that the Department considers reasonable.

The Department has received and reviewed the following documents prepared by Advanced GeoServices, which together describe a pilot study meant to evaluate a possible remedial technology for existing contamination at the Site:

1. In-situ Ozone Injection Pilot Test Work Plan, received by the Department on November 21, 2016, and prepared by Advanced GeoServices (AGS); and
2. Response to DEM Comments- dated December 6, 2016 prepared by Advanced GeoServices.

The proposed pilot study involves conversion of the Air Sparging Wells, AS-1(screened 38-40 feet bgs) and AS-2(screened 19-21 bgs) into Ozone Injection Wells as part of a 5 day pilot test to determine if an in-situ reactive barrier can be installed parallel to the river bulkhead which will use Ozone (an oxidant) being regularly applied to destroy the VOC contamination at depth in-situ before it migrates into the Pawtuxet River.

Based upon our review, the Department approves the pilot study outlined in the **In-situ Ozone Injection Pilot Test Work Plan**. Any proposed changes to the Department approved pilot study shall be pre-approved by the Department and reported to the Department by telephone within one (1) working day and in writing within five (5) business days.

It is the Department's intent that all conditions set forth in this Pilot Study Approval Letter shall remain in full force and effect unless specifically altered by the Department in writing. Further, this letter continues to place primary responsibility for the construction, operation, and maintenance and monitoring of the approved In-situ Ozone Injection Pilot Test Work Plan and its associated implementation on the **BASF Corporation**. As the Responsible Party and Performing Party, **BASF Corporation** is expected to implement the In-situ Ozone Injection outlined in the **In-situ Ozone Injection Pilot Study Work Plan** in an expeditious and professional manner that prevents non-compliance with this letter and said Work Plan, and protects human health and the environment.

This Pilot Study Approval Letter does not remove your obligation to obtain any necessary permits from other local, State, and/or Federal agencies.

If you have any questions regarding this letter or would like the opportunity to meet with Department personnel, please contact me by telephone at (401) 222-2797, ext. 7102, or by E-mail at jeff.crawford@dem.ri.gov.

Sincerely,

Jeffrey Crawford, Project Manager
Principal Environmental Scientist
Office of Waste Management

Authorized by,

Kelly Owens
Supervising Engineer
Office of Waste Management
